Technical Skills

Languages: Go, TypeScript, Python, JavaScript, SQL, Bash

AI Agents & LLMs: LangGraph, LangChain, Tool Calling, MCP, RAG (KNN + BM25), LiteLLM, Claude Code, Codex, OpenAI, Groq, Azure AI Foundry, SSE, Token and Cost Tracking

Backend: FastAPI, NestJS, Node.js, Gin, KrakenD, GraphQL, Hasura, Temporal, OAuth 2.0, REST APIs, Webhooks, Microservices

Data: PostgreSQL, Aurora MySQL, Redis, Valkey, DynamoDB, OpenSearch, MongoDB, SQLite, SQS, SNS, DynamoDB Streams, EventBridge

Infrastructure: AWS (ECS, EC2, RDS, Lambda, CloudWatch), GCP (Firebase, Firestore), Docker, Kubernetes (k3s), Terraform, GitHub Actions

Frontend: React, Next.js, Vite, NX, Module Federation, React Native, PWA

Concepts: System Design, Distributed Systems, Concurrency, Multi-Tenant Architecture, Idempotency, Observability, Resiliency Patterns

Experience

Software Development Engineer

Zotok.ai

Jan 2025 – Present

Hyderabad, India

- Architected and shipped an **agentic AI copilot** (FastAPI, LangGraph) from POC to production, serving **5k+ DAU and 100k+ conversations/day**. Partnered with sales, business and customer-facing teams on workflows that drove a **200%+ increase in daily sales leads**.
- Built **Temporal-scheduled extraction agents** for **20+ client WhatsApp groups** (72 runs/day, 1k+ messages per tenant), writing structured Google Sheets output using tenant-specific guidance; migrated the service from Python to **TypeScript**.
- Operated a self-hosted **LiteLLM proxy** processing **100M tokens/day across 5 services**, with per-source token tracking and plan-based budget enforcement to measure and cap agent usage.
- Implemented hybrid **RAG** over OpenSearch (KNN + BM25), Redis and **PostgreSQL**, plus 4 streaming strategies including SSE, AG-UI and LangGraph multi-mode for agent-rendered chat interfaces.
- Built a multi-tenant **GraphQL** layer (Hasura, NestJS, **PostgreSQL**) with dynamic tenant schemas, query guards and role-based access control for agents accessing internal business data.
- Built a **Go** API gateway (Gin, KrakenD) for **12 microservices**, with authentication, rate limiting and routing: **1k RPS steady, 10k RPS under load and 100ms P95 latency**.
- Designed event-driven SQS, SNS, DynamoDB Streams and webhook pipelines with idempotency, retries, dead-letter handling and reconciliation for missed or delayed events.

Open Source & Projects

- **agent-bridge** [↗](#) (TypeScript, Node.js; published on npm) — Built a zero-runtime-dependency WhatsApp bridge for Claude Code, Codex and Command Code: verified model/harness switching, named threads, file exchange and private context imports. Added plan/write modes, chat approvals for supported harnesses, HMAC verification, deduplication and a configuration dashboard.
- **hermes-openwa** [↗](#) (Python) — Built a Nous Hermes Agent plugin reusing an existing OpenWA session without re-pairing; self-chat default, raw-byte signature verification and an ack-first worker queue. Verified live end to end; 45 tests across Python 3.11–3.13.
- **jobwatch** [↗](#) (Go, Python, React, SQLite) — Built a self-hosted job-search agent polling 50+ ATS boards and aggregators, scoring roles, generating fact-constrained LaTeX resumes and drafting outreach; deployed on k3s with GitHub Actions CD.
- **Terminal Portfolio** [↗](#) (Go, BubbleTea, Wish) — Built an SSH TUI at [ssh portfolio.mayurathavale.com](https://ssh.portfolio.mayurathavale.com) with SQLite visitor analytics and live presence tracking.
- **Self-hosted k3s cluster** (Docker, GitHub Actions, WireGuard) — Consolidated 4 services from 3 AWS EC2 instances onto one Contabo VPS, reducing monthly hosting costs by **approximately 80%**.

Education

College of Engineering, Pune (COEP)

B.Tech

2020 – 2024
